Wellbeing Passport

Imagined for

Dhun

Internet of Value Research Foundation

Proposed six-month research engagement · November 2026

The continuity problem

What remains after an experience?

A photograph can recall a place.
An observation can help a person return to what they noticed.

Why Dhun

During my residency at Dhun, our conversation gave this idea a concrete setting: people learning through water, food and energy systems.

Precedents: support passports teach chosen context; journals teach return reflection; credentials teach issuer and claim scope. Dhun would test continuity and review boundaries.

Wellbeing Identity

8 nodes · 50 facets

08	Consent & Disclosure	7 facets

One person, eight identity layers. Month 1 begins with voluntary identity work and consent.

The existing product

Value Log Passport: observations and review evidence

Actual reviewed presentation components at source revision 8455a31.

Page turns · day selection · filters
Reading / Movement / Evidence

Fixed fictional data. No private API calls, calculations, recordings, saves or sharing.

Manisha: identity → yoga → team meeting → Dhun → scrolling → meal / bhajan → return reflection

Two staged Dhun journeys

Opt-in staff first. A bounded visitor/resident test when ready.

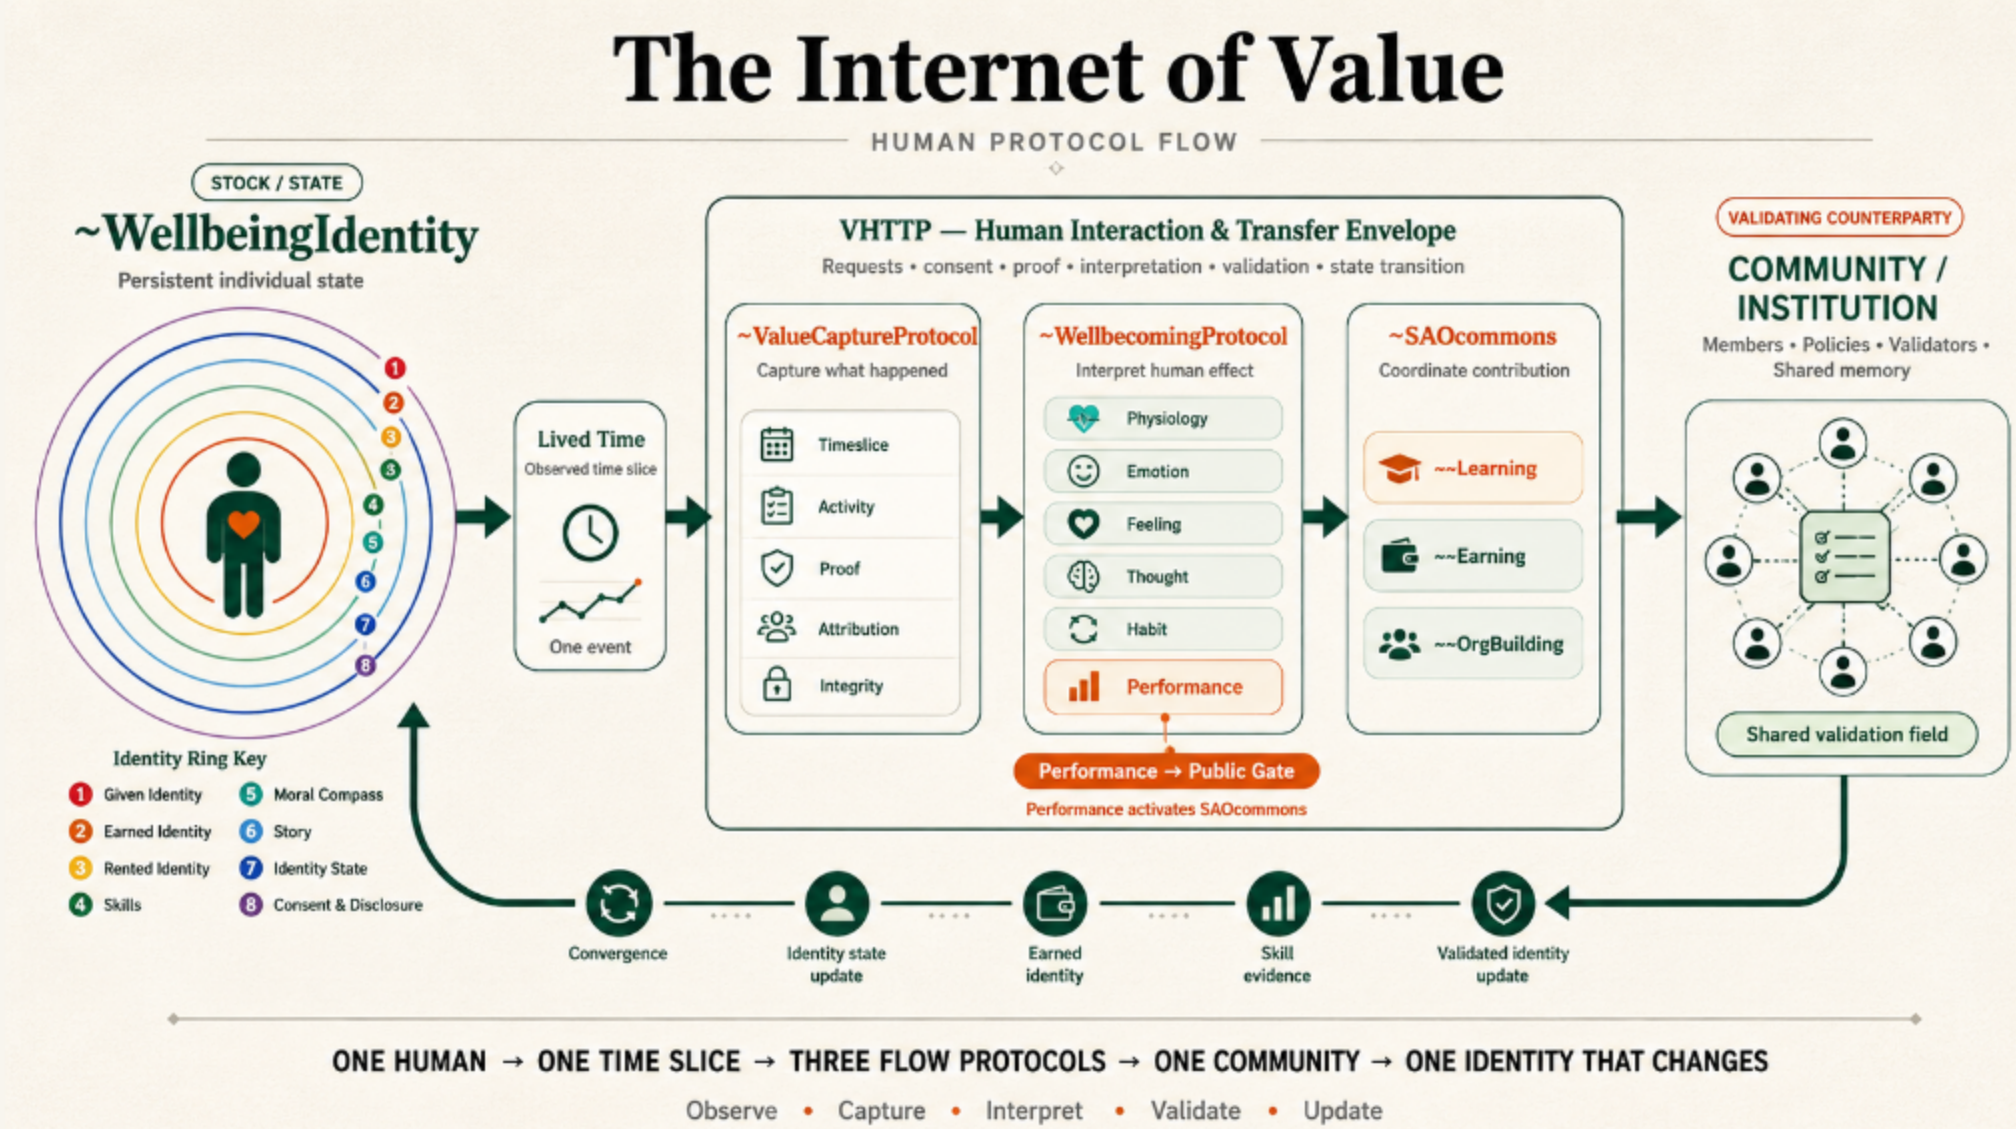

Staff: voluntary identity work → ordinary day → chosen shared review → private return reflection.

Visitors/residents: choose identity context → encounter → observation → host acknowledgment. Contribution review is separate.

A host can acknowledge participation. A contribution claim needs an agreed reviewer.

Managers do not gain access to personal journals.

Four protocols, one living identity

Theory and limits: Observer Attention Is All You Need · Full-size diagram and sources in the proposal

Six months, with review points

Proposed: I would lead research/product work with two embedded research associates, subject to joint agreement.

M1: consent, voluntary eight-node identity work, interviews and cohort agreement.

M2: co-design identity, observation and review. M3–4: staged pilots.

M5: return reflection. M6: findings, product/operating specifications and a continue/change/stop recommendation.

Optional M7–12 replication is separately agreed. Fees and financial projections excluded.

Agreement in principle

Discuss the six-month programme

Nominate a Dhun sponsor/coordinator.

Scope the cohort, field access, staffing and commercial terms together.

Agree consent, review authority, withdrawal and when we change or stop.

An exploratory research engagement. No guaranteed wellbeing outcome or existing partnership.
